

KWB – THE SAFE ENERGY SOLUTION FOR YOUR HOME

Basic press folder

Status: April 2024

<p>This is KWB</p>	<p>KWB Energiesysteme, with its headquarters in the Styrian town St. Margarethen an der Raab in Austria, has evolved from a pioneer in modern wood-based heating systems to a leading provider of comprehensive solutions for heat and electricity from renewable energies. The core business of the company, which was founded in 1994, is the manufacture of clean and efficient heating systems in premium quality.</p> <p>With its broad product portfolio – from solar and photovoltaic systems to storage systems through to an intelligent energy management system – KWB offers its customers the opportunity to strive towards energy independence in their own four walls. With its own service and distribution network in Austria, Germany, France and Italy and local distribution partners elsewhere, KWB now boasts a presence on all continents and actively contributes to the creation of a green energy future.</p>
<p>Styrian pioneer for energy solutions</p>	<p>The solution to our climate problem can be found in the intelligent generation and use of renewable energies. As a pioneer of modern heating systems, KWB has been able to use this heat and electricity as efficiently and sustainably as possible in its future-oriented energy solutions.</p> <p>The aim of KWB is a future in which homes are supplied with renewable energy, where digitalised comprehensive solutions ensure comfort and efficiency, and where people enjoy the satisfaction of the greatest possible level of safety and energy independence.</p>
<p>KWB Energiesysteme GmbH is paving the way towards energy independence</p>	<p>Since the company was founded, everyone at KWB is convinced that the use of renewable energy must be as simple and clean as possible for everyone. This can be achieved with technical innovations. The system solutions developed by the Styrian company thus support its customers to achieve this exact goal. With personalised and highly technical energy systems, KWB is bringing the energy transition to private homes and companies, paving the way for its customers to become energy self-sufficient.</p>

<p>Innovative spirit & technology pioneer</p>	<p>KWB combines ecological heating with top comfort and has been a successful product provider and technology pioneer standing for the core values of "premium quality, durability and sustainability". Many KWB inventions and patents embody the innovative spirit of the company: such as the cleanest combustion and highest level of efficiency thanks to the cleanEfficiency 2.0 technology, the robust KWB Crawler Burner, KWB's modular and easily transportable system, and also the intelligent energy management system Clee.</p>
<p>This will ensure the energy transition in your own four walls</p>	<p>The challenge of our time is for us to use all of the renewable energy sources available to us in the best way possible. KWB simplifies this process by combining complex hybrid systems in a coordinated energy system that is installed by a single source.</p> <p>Clee – the clever energy manager marks a turning point in this regard as it makes customers' homes greener, more efficient and more independent. Of course, every house is as individual as the people who live in it. Thanks to the latest technology from KWB it is possible to control the flow of energy in the house, adjusted to the location and energy requirements, to ensure maximum sustainability and efficiency.</p> <p>The intelligent energy manager system ensures the optimum use of free solar energy and minimises the amount of purchased energy completely automatically. The auto-adaptive software is based on artificial intelligence and takes local weather forecasts into consideration to continuously optimise itself.</p>
<p>History</p>	<p>After many years of development, the company "KWB – Kraft und Wärme aus Biomasse GmbH" was founded in 1994. In the following years, KWB expanded internationally opening branches in Germany, France and Italy.</p> <p>PDP Holding GmbH led by Peter Daniell Porsche has been the company's majority shareholder since 2016. KWB currently employs around 400 people group-wide. Production and</p>

	<p>central management are located at the company headquarters in the Austrian town of St. Margarethen an der Raab.</p> <p>On its journey from a boiler manufacturer to a system solution provider, the company changed its official name to "KWB Energiesysteme GmbH" in 2022.</p>
